When the AHA revised its CPR guidelines in 2010, it announced that chest compressions should be performed first before opening the person's airway.The old model was ABC (Airway, Breathing ...

[Red Cross Training | Take a Class | Red Cross](#)

CPR uses chest compressions and rescue breaths to make oxygen-rich blood circulate through the brain and other vital organs until the child revives or emergency medical personnel arrive. Keeping oxygenated blood circulating helps prevent brain damage - which can occur within a few minutes - and death. Infant CPR isn't hard to do.
