Hola. Mi inquietud es q tengo un a.a inverter de 9000btu es nuevo, el refrigerante es r410a . Yo lo programo para q se apague en 3 hrs de encendido y estoy notando q despues de la hora baja intensidad con el q enfría es como si quedara sólo en ventilación se apaga pero no enfría como antes. Yo lo proframo a 25°C.

[El Mito De La Carga De Gas En El Aire Acondicionado](#)

A mi aire acondicionado le falta gas. Para detectar si a una unidad de aire acondicionado le falta de gas en bomba de calor te que acercarnos a la unidad exterior y revisar si esta por su parte trasera (intercambiador exterior) se congela o se escarcha, generalmente podremos observarlo pasados unos minutos desde que la unidad arrancó e indica que la unidad está con falta de gas.
